

Intelligence That Makes A Difference

Intelligent filters ignore moving branches, bushes, flags, and banners and moving traffic anywhere you specify. When it detects an alarm condition, it automatically sounds the alarm and begins tracking and recording. A guard or operator CANNOT overlook the problem. A picture of the problem is always on screen until the system is reset. A one-button click plays back the entire video record so no time is lost searching a DVR record for the date and time of the alarm condition. Guards and operators can immediately assess the situation in time to take action.

A Single Unit or Scale To An Enterprise Solution That Matches Your Operations.

Eagle-i

Eagle-i Video Recon™

A system to PREVENT or DETER a threat BEFORE it happens. Its intelligence makes it impossible to penetrate an area without being detected.

Early warning prevents overlooking a threat. No post analysis to learn what happened. Eagle-i uses reference and zoom CCTV cameras that continuously check the entire area. It detects intruders and automatically sounds the alarm.

Fully Automatic Surveillance
Less Effort And Reduced Cost

People cannot stare at anything for more than 22 minutes. Eagle-i eliminates people having to stare at a monitor. This reduces the number of people required to watch any size area or frees them to do other tasks. It is a fully automated, intelligent, video surveillance system that operates without continuous human support until it detects a problem. Its intelligence and sensitivity permits detecting problems at a distance that is beyond human ability. Its reference camera continuously watches the entire area no matter what the zoom camera is doing. Intruders can not fool the system by having the zoom camera track decoys.

Product Release

Jemez Technology Corporation and Aquila Command, LLC are pleased to announce the release of their remote viewer video surveillance products. The Aquila Command server instantly notifies security personnel **ANY WHERE IN THE WORLD** with pictures of the cause and location of an intrusion alarm. Simultaneously, the intruder's actions are being followed and recorded by one or more intelligent video cameras equipped with a high-resolution zoom lens to produce fully-annotated prosecutable-quality video. The Aquila Command Server provides seamless integration of surveillance cameras from multiple locations to create an enterprise class security command and control center
